Introducción a la Inteligencia Artificial Facultad de Ingeniería Universidad de Buenos Aires

Índice

Clase 6

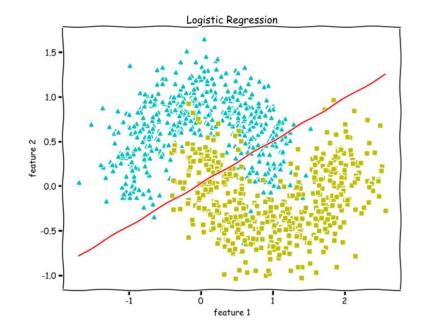

- Clasificación Binaria
 - a. Motivación
 - b. Regresión Logística Ejercicio de Aplicación
 - c. Regresión Logística Teoría
- 2. Clasificación Multiclase
 - a. Motivación
 - b. Softmax
 - c. Ejercicio de Aplicación
- 3. Ejercicio integrador

Clasificación Binaria

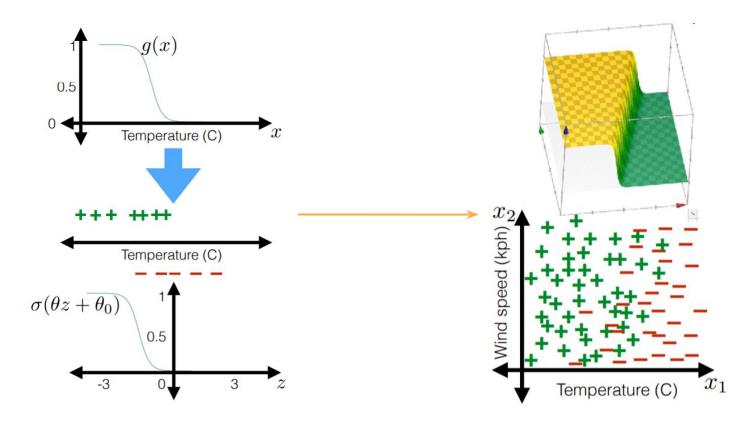

Clasificación Binaria - Motivación

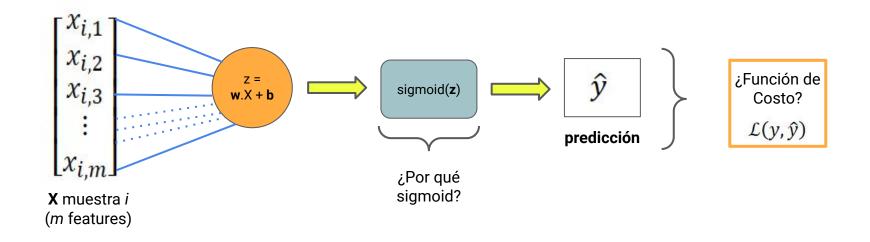

- Credit Card Fraudulent Transaction Detection
- Medical Diagnosis
- Spam Detection
- Sentiment Analysis
- Binary Image Classification

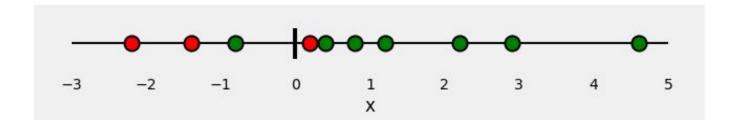

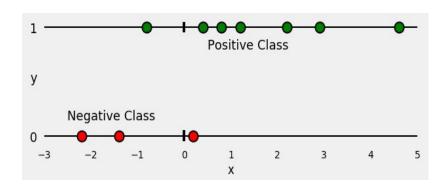

Clasificación Binaria

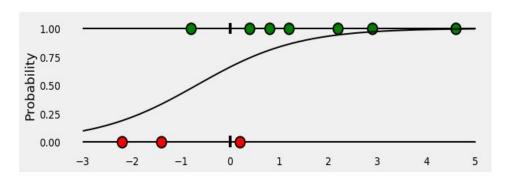

Clasificación Binaria - Motivación

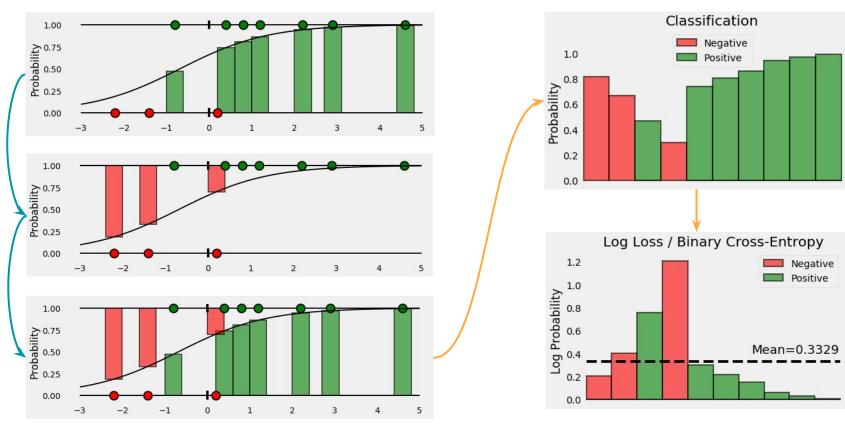

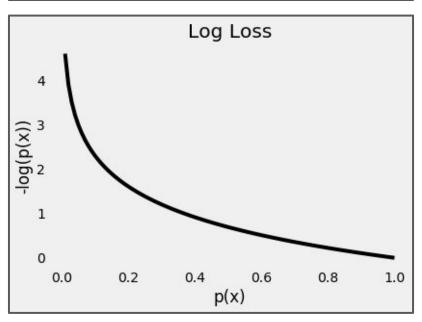

$$H_p(q) = -\frac{1}{N} \sum_{i=1}^{N} y_i \cdot log(p(y_i)) + (1 - y_i) \cdot log(1 - p(y_i))$$

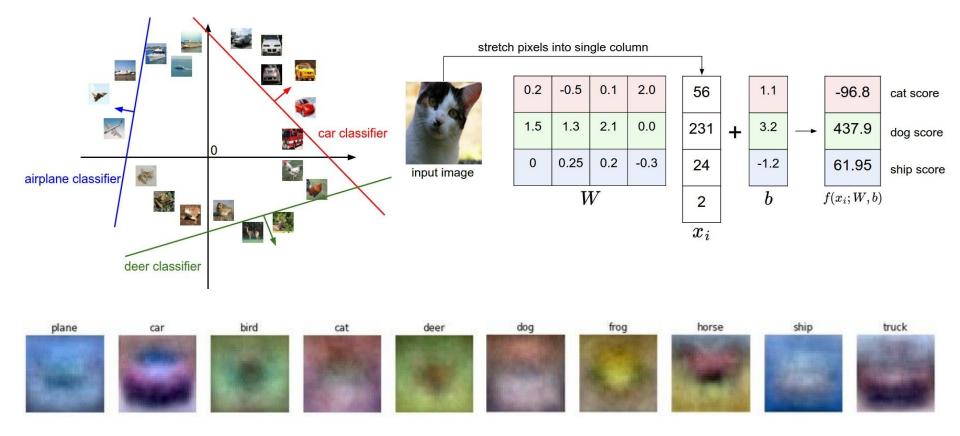

(1) REGRESIÓN LOGÍSTICA - EJERCICIO DE APLICACIÓN

(1) REGRESIÓN LOGÍSTICA - TEORÍA

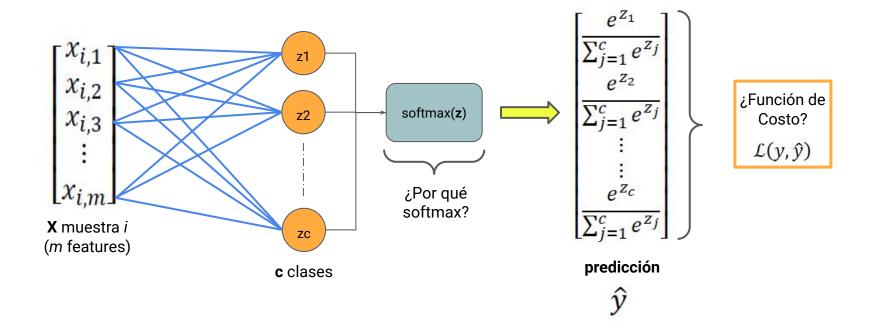

Clasificación Multiclase

Clasificación Multiclase - Motivación

Softmax

Softmax

Softmax

$$egin{align} P(y_i \mid x_i; W) &= rac{e^{f_{y_i}}}{\sum_j e^{f_j}} \ &rac{e^{f_{y_i}}}{\sum_j e^{f_j}} &= rac{Ce^{f_{y_i}}}{C\sum_j e^{f_j}} &= rac{e^{f_{y_i} + \log C}}{\sum_j e^{f_j + \log C}} \end{aligned}$$

Softmax Forma Gráfica

Softmax Visualización 3D

$$q(\mathsf{x})$$
 $H(p,q) = -\sum_x p(x) \log q(x)$

Softmax

Derivación Softmax

$$p_i = \frac{e^{z_i}}{\sum_{j=1}^{C} e^{z_j}}$$

$$\frac{\partial p_i}{\partial z_k} = \frac{\partial \frac{e^{z_i}}{\sum_{j=1}^C e^{z_j}}}{\partial z_k}$$

$$\frac{\partial p_i}{\partial z_k} = p_i(\delta_{ik} - p_k) \qquad \delta_i k = \begin{cases} 1, i = k \\ 0, i \neq k \end{cases}$$

Derivación **Cross-Entropy**

$$\begin{split} L &= -\sum_{i} y_{i} log(p_{i}) \\ \frac{\partial L}{\partial z_{i}} &= -\sum_{j} y_{j} \frac{\partial log(p_{j})}{\partial z_{i}} \\ &= -\sum_{j} y_{j} \frac{\partial log(p_{j})}{\partial p_{j}} \times \frac{\partial p_{j}}{\partial z_{i}} / \\ &= -\sum_{j} y_{j} \frac{1}{p_{j}} \times \frac{\partial p_{j}}{\partial z_{i}} / \\ &= -\sum_{j} y_{j} \frac{1}{p_{j}} \times \frac{\partial p_{j}}{\partial z_{i}} / \\ &= \int_{i} \frac{\partial L}{\partial z_{i}} = p_{i} - y_{i} \end{split}$$

Usar gradiente descendente para actualizar W!!!

$$\frac{\partial L}{\partial W} = \sum_{i=1}^{N} (p_i - y_i) x_i$$

(1) SOFTMAX - EJERCICIO DE APLICACIÓN

Ejercicios

Ejercicio integrador

- 1. Implementar el algoritmo de regresión logística en NumPy.
- 2. Aplicar el modelo a un dataset de elección.
- 3. Comparar los resultados con Scikit-Learn.
- 4. Comparar los resultados agregando regularización.
